

REISER and TRU Simulation collaborate to bring new helicopter model availability for the Veris Virtual Reality Simulator

VERTICON Atlanta, Georgia – 10th March 2026

REISER today announced a new training offering for the Airbus H125 helicopter on the Veris Virtual Reality (VR) Flight Simulator. Developed in collaboration with TRU Simulation + Training Inc., a Textron Inc. company, and an affiliate of Textron Aviation, the Veris H125 provides a high-fidelity, cost-effective solution for immersive pilot instruction.

The Veris H125 will be built on TRU Simulation's Federal Aviation Administration (FAA) Level 7-qualified Veris platform and will combine Reiser's high fidelity flight controls, panels and simulation model of the H125 platform – which is already used in Level D Full Flight Simulators (FFS). By integrating Reiser's expertise in Airbus H125 systems with TRU Simulation's innovative flight simulator, the device provides top-tier realism with scalable deployment to further broaden access to certified helicopter training worldwide.

The Veris will use TRU Simulation's new REALvision™ Image Generator (IG) which is tailored and designed specifically for the usage in VR devices to create incredible realism and feeling while flying the H125. The device also incorporates a fully electric

six degrees of freedom motion base to deliver accurate flight cues and vibrations while leveraging the same flight data, software baselines and advanced technologies found in TRU Simulation's Level D FFS, including the REALFeel™ control loading system. Tactile cockpit panels allow pilots to interact with aircraft switches and avionics in a manner consistent with the H125, while a virtual reality headset replaces the traditional visual system to fully immerse pilots in the flight environment.

About Reiser Simulation and Training GmbH

REISER Simulation and Training GmbH has been leading the revolution in aviation training for over three decades. With a distinctive German engineering touch, REISER has been delivering innovations globally, enhancing the efficiency and safety of flight personnel training worldwide.

Our simulators and training devices minimize the ecological footprint associated with traditional training methods but also conserve vital resources. REISER's commitment to sustainability is evident in every aspect of our operations.

About TRU Simulation

TRU Simulation + Training Inc., an affiliate of Textron Aviation Inc., is a leading provider of high-fidelity training devices and full-motion simulators for the aviation industry. With a strong commitment to excellence and innovation, TRU Simulation has been at the forefront of flight simulation technology for over a decade. Our customized simulator solutions empower pilots to navigate the skies confidently, while our state-of-the-art technology ensures safe and realistic training experiences.
